

Mini MT GPRS Tracking Device

The Mini MT is a handheld tracking device with inbuilt mobile phone. Simple and stylish the Mini MT comes complete with belt clip or can be placed in a pocket or bag.

By pressing and holding the side button the Mini MT advises the Control Room in less than a second of the button press. The Control Room can make a call to the Mini MT which it automatically answers to start a conversation with the person holding the Mini MT

The Mini MT is a great choice for use:

- The elderly not tied to a particular address
- Lone Employees
- Travelling staff visiting many locations eg District Nurse, Estate Agents etc
- Covering OH&S requirements

All that is required for the Mini MT to function is mobile phone reception.

The top of the Mini MT shows low battery level, GPS locations being received and a flashing "ON" Light.

Even if the unit isn't receiving a GPS signal it will report its last location if the button is pressed

All journeys are logged and can be played back from the web based system. Each journey shows speed, time and location for each point. Road maps as well as aerial maps can be selected.

Each unit can have its own login to our web based system alternatively a group of units can be displayed on the same map.

Battery life on the system is usually in excess of 24 hours, the units can be charged "on the go" using a standard mini usb charger or a "plug pack" type charger.
